IP20 SELV RoHS

TALEXconverter LCI 35 W 350/500/700/1050 mA TEC SR

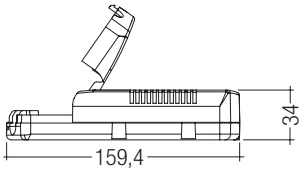
TEC series

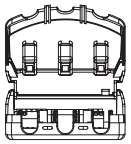
Product description

- Independent fixed output LED control gear
- Constant current LED control gear
- Output current 350, 500, 700 or 1,050 mA
- Max. output power 35 W
- Nominal life-time up to 50,000 h
- For luminaires of protection class I and protection class II
- For luminaires with M and MM as per EN 60598, VDE 0710 and VDE 0711
- Temperature protection as per EN 61347-2-13 C5e
- 5-year guarantee

Properties

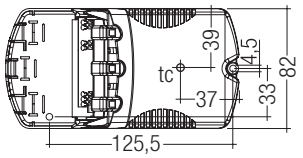
- Casing: polycarbonat, white
- Type of protection IP20

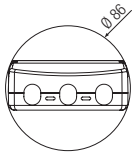




Functions

- Overtemperature protection
- Overload protection
- Short-circuit protection
- No-load protection





Technical data

Rated supply voltage	220 – 240 V
AC voltage range	198 – 264 V
Current at 50 Hz 230 V	0.17 A
Mains frequency	50 / 60 Hz
Overvoltage protection	300 V AC, 1 h
Max. input power	41.5 W
Typ. output power	35 W
THD (at 230 V, 50 Hz, full load)	< 20 %
Output current tolerance	± 7.5 %
Turn on time (at 230 V, 50 Hz, full load)	≤ 0.7 s
Turn off time (at 230 V, 50 Hz, full load)	≤ 0.7 s
Hold on time at power failure	0 s
Ambient temperature ta	-20 ... +50 °C
Ambient temperature ta (at life-time 50,000 h)	40 °C
Max. casing temperature tc	75 °C
Storage temperature ts	-40 ... +80 °C
Dimensions L x W x H	159.4 x 82 x 34 mm

Ordering data

Type	Article number	Packaging, carton	Packaging, low volume	Packaging, high volume	Weight per pc.
LCI 35W 350mA TEC SR	87500193	20 pc(s).	280 pc(s).	1,120 pc(s).	0.181 kg
LCI 35W 500mA TEC SR	87500195	20 pc(s).	280 pc(s).	1,120 pc(s).	0.183 kg
LCI 35W 700mA TEC SR	87500197	20 pc(s).	280 pc(s).	1,120 pc(s).	0.181 kg
LCI 35W 1050mA TEC SR	87500199	20 pc(s).	280 pc(s).	1,120 pc(s).	0.185 kg

[1] Test result at 230 V, 50 Hz.

[2] The trend between min. and full load is linear.

Standards
EN 55015
EN 60598-1
EN 61000-3-2
EN 61000-3-3
EN 61347-1
EN 61347-2-13
EN 61547
EN 62384

Overload protection
If the output voltage range is exceeded the LED control gear reduces the LED output current. After elimination of the overload the nominal operation is restored automatically.

Overtemperature protection
The LED control gear is protected against temporary thermal overheating. If the temperature limit is exceeded the output current is reduced to limit tc at a certain level. It restarts automatically. The temperature protection is activated typically at 8 °C above tc max.

Short-circuit behaviour
In case of a short circuit on the secondary side (LED) the LED control gear switches into hic-cup mode. After elimination of the short circuit the nominal operation is restored automatically.

No-load operation
The LED control gear works in constant voltage mode. In no-load operation the output voltage will not exceed the specified max. output voltage (see page 2).

Installation instructions
The LED module and all contact points within the wiring must be sufficiently insulated against 4.0 kV surge voltage.
Air and creepage distance must be maintained.

Replace LED module
1. Mains off
2. Remove LED module
3. Wait for 60 seconds
4. Connect LED module again

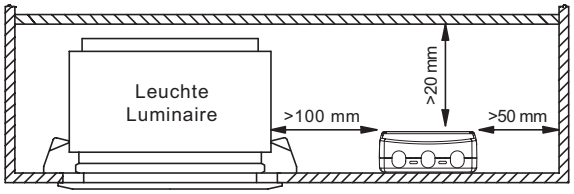
Hot plug-in or secondary switching of LEDs is not permitted and may cause a very high current to the LEDs.

Expected life-time

Type	ta	40 °C	50 °C	60 °C
LCI 35W xxxmA TEC SR	tc	65 °C	75 °C	x
	Life-time	50,000 h	30,000 h	x

The LED Drivers are designed for a life-time stated above under reference conditions and with a failure probability of less than 10 %.

Fixing conditions
Dry, acidfree, oilfree, fatfree. It is not allowed to exceed the maximum ambient temperature (ta) stated on the device. Minimum distances stated below are recommendations and depend on the actual luminaire. Is not suitable for fixing in corner.



Storage conditions
Humidity: 5 % up to max. 85 %
not condensed
(max. 56 days/year at 85 %)

Storage temperature: -40 °C up to max. +80 °C

The devices have to be within the specified temperature range (ta) before they can be operated.

Maximum loading of automatic circuit breakers

Automatic circuit breaker type	C10	C13	C16	C20	B10	B13	B16	B20	Inrush current

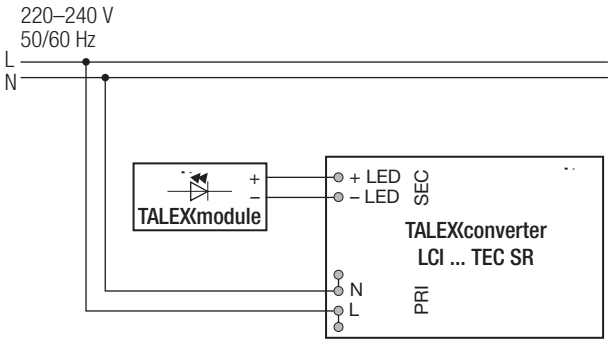
Wiring diagram



Glow wire test
according to EN 60598-1 with increased temperature of 960 °C passed.

Isolation and electric strength testing of luminaires
Electronic devices can be damaged by high voltage. This has to be considered during the routine testing of the luminaires in production.

According to IEC 60598-1 Annex Q (informative only!) or ENEC 303-Annex A, each luminaire should be submitted to an isolation test with 500 V_{DC} for 1 second. This test voltage should be connected between the interconnected phase and neutral terminals and the earth terminal.
The isolation resistance must be at least 2 MΩ.

As an alternative, IEC 60598-1 Annex Q describes a test of the electrical strength with 1500 V_{AC} (or 1.414 x 1500 V_{DC}). To avoid damage to the electronic devices this test must not be conducted.

Additional information

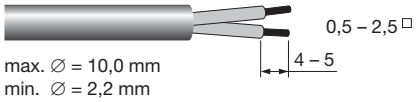
Additional technical information at www.tridonic.com → Technical Data

Guarantee conditions at www.tridonic.com → Services

Life-time declarations are informative and represent no warranty claim.
No warranty if device was opened.

Wiring type and cross section
The wiring can be in stranded wires with ferrules or solid. For perfect function of the cage clamp terminals the strip length should be 4 – 5 mm for the input terminal.
The max. torque at the clamping screw (M3) is 0.2 Nm.

Input / Output terminal



Wiring instructions
- All connections must be kept as short as possible to ensure good EMI behaviour
- Mains leads should be kept apart from LED control gear and other leads (ideally 5 – 10 cm distance)
- The maximum length of output wires is 2 m.
- Secondary switching is not permitted.
- Incorrect wiring can damage LED modules.
- Through wiring of mains is connecting additional LED Driver only. Max. permanent current of 16 A may not be exceeded.
- The wiring must be protected against short circuits to earth (sharp edged metals parts, metal cable clips, louver, etc.)
