

Modul CLE ADV5 new variant

Modules CLE advanced

CLE 50mm 1000lm ADV5

CLE 80mm 2000lm ADV5

CLE 120mm 2500lm ADV5

Product description

- _ Ideal for ceiling-mounted and wallmounted luminaires
- _ SO version is compatible with SWITCH Sensor HF 5BP
- _ Integrated separate emergency LEDs with CLE 190/220/315/370mm controlled by EM powerLED
- _ Push terminals for quick and simple wiring
- _ HE ... High Efficiency, NM ... Nominal Mode, HO ... High Output
- _ UL 8750 certification for CLE 120mm 2500lm ADV5 articles
- _ Min. order quantity for CLE 50mm is 10 pcs. and for CLE 80 and 120mm 20 pcs.
- _ Long lifetime up to 102,000 hours
- _ 5 years guarantee (conditions at <https://www.tridonic.com/en/int/services/manufacturer-guarantee-conditions>)

Optical properties

- _ Colour temperatures 2,700, 3,000 and 4,000 K
- _ Efficacy of the LED module up to 204 lm/W
- _ High colour rendering index CRI > 80 and CRI > 90
- _ Small colour tolerance (MacAdam 3) ^①
- _ Small luminous flux tolerances

Mechanical properties

- _ Module dimension ø50, ø80, ø120, ø160, ø190, ø220, ø315 and ø370 mm
- _ Simple installation (e.g. screws)

System solution

- _ LED system solution consisting of the LED module, the LED driver with integrated emergency function and SWITCH sensor

^① Integral measurement over the complete module.

Energy label and further information at www.tridonic.com in the certificates tab of the corresponding product page and at the EPREL data base <https://eprel.ec.europa.eu/>

2. Thermal details

2.1 tp point, ambient temperature and lifetime

The temperature at tp reference point is crucial for the light output and lifetime of a LED product.

For CLE a tp temperature of 65 °C has to be complied in order to achieve an optimum between light output and lifetime.

Compliance with the maximum permissible reference temperature at the tc point must be checked under operating conditions in a thermally stable state. The maximum value must be determined under worst-case conditions for the relevant application.

The tc and tp temperature of LED modules from Tridonic are measured at the same reference point.

2.2 Storage and humidity

Storage temperature	-40... +85 °C
---------------------	---------------

Operation only in non condensing environment.

Humidity during processing of the module should be between 30 to 70 %.

2.3 Thermal design and heat sink

The rated life of LED products depends to a large extent on the temperature. If the permissible temperature limits are exceeded, the life of the CLE will be greatly reduced or the CLE may be destroyed.

2.4 Heat sink values

Notes

The actual cooling can differ because of the material, the structural shape, outside influences and the installation situation. A thermal connection between CLE and heat sink with heat-conducting paste or heat conducting adhesive film is absolutely necessary.

Additionally the CLE has to be fixed on the heat sink with M3 / M4 screws to optimise the thermal connection.

3. Installation / wiring**3.1 Electrical supply/choice of LED driver**

CLE from Tridonic are not protected against overvoltages, overcurrents, overloads or short-circuit currents. Safe and reliable operation can only be guaranteed in conjunction with a LED driver which complies with the relevant standards. The use of LED drivers from Tridonic in combination with CLE guarantees the necessary protection for safe and reliable operation.

If a LED driver other than Tridonic is used, it must provide the following protection:

- Short-circuit protection
- Overload protection
- Overtemperature protection

CLE must be supplied by a constant current LED driver. Operation with a constant voltage LED driver will lead to an irreversible damage of the module. Wrong polarity can damage the CLE.

CLE can be operated either from SELV LED drivers or from LED drivers with LV output voltage.

CLE 50, 80mm are basic insulated up to 200 V (if mounted with M3 screws with head diameter 6 mm) against ground and can be mounted directly on earthed metal parts of the luminaire. CLE 120, 160, 190, 220, 315 and 370mm are basic insulated up to 200 V (if mounted with M4 screws with head diameter 8 mm) against ground and can be mounted directly on earthed metal parts of the luminaire. If the max. output voltage of the LED driver (also against earth) is above 200 V, an additional insulation between LED module and heat sink is required (for example by insulated thermal pads) or by a suitable luminaire construction.

At voltages > 60 V an additional protection against direct touch (test finger) to the light emitting side of the module has to be guaranteed. This is typically achieved by means of a non removable light distributor over the module.

3.2 Wiring

CLE 50mm

CLE 80mm

CLE 120mm

CLE 160mm

CLE 190/220/315/370mm

Wiring example

3.3 Wiring type and cross section

CLE 50mm:

For wiring use solid wire from 0.14 to 0.5 mm².For the push-wire connection you have to strip the insulation 4–5.5 mm for 0.14 to 0.34 mm² and 6–7.5 mm for 0.5 mm².

Loosen wire through twisting and pulling.

4 – 5.5 mm with 0.14 – 0.34 mm²
6 – 7.5 mm with 0.5 mm²

Press down the “push button” and remove the wire from front.

CLE 80, 120, 160, 190, 220, 315, 370mm:

For wiring use stranded wire with ferrules or solid wire from 0.2 to 0.75 mm².

For the push-wire connection you have to strip the insulation (7–9 mm).

Loosen wire through twisting and pulling.

wire preparation:
0.2 – 0.75 mm²

7 – 9 mm

Press down the “push button” and remove the wire from front.

3.4 Mounting instruction

None of the components of the CLE (substrate, LED, electronic components etc.) may be exposed to tensile or compressive stresses.

Max. torque for fixing: 0.5 Nm.

The LED modules are mounted with 3 or 4 screws per module. In order not to damage the modules only rounded head screws should be used.

Chemical substance may harm the LED module. Chemical reactions could lead to colour shift, reduced luminous flux or a total failure of the module caused by corrosion of electrical connections.

Materials which are used in LED applications (e.g. sealings, adhesives) must not produce dissolver gas. They must not be condensation curing based, acetate curing based or contain sulfur, chlorine or phthalate. Avoid corrosive atmosphere during usage and storage.

3.5 EOS/ESD safety guidelines

The device / module contains components that are sensitive to electrostatic discharge and may only be installed in the factory and on site if appropriate EOS/ESD protection measures have been taken. No special measures need be taken for devices/modules with enclosed casings (contact with the pc board not possible), just normal installation practice. Please note the requirements set out in the document EOS / ESD guidelines (Guideline_EOS_ESD.pdf) at: <http://www.tridonic.com/esd-protection>

4. Lifetime

4.1 Lifetime, lumen maintenance and failure rate

The light output of an LED module decreases over the lifetime, this is characterized with the L value.

L70 means that the LED module will give 70 % of its initial luminous flux. This value is always related to the number of operation hours and therefore defines the lifetime of an LED module.

As the L value is a statistical value and the lumen maintenance may vary over the delivered LED modules.

The B value defines the amount of modules which are below the specific L value, e.g. L70B10 means 10 % of the LED modules are below 70 % of the initial luminous flux, respectively 90 % will be above 70 % of the initial value. In addition the percentage of failed modules (fatal failure) is characterized by the C value.

4.2 Lumen maintenance

Forward current	tp temperature	L90 / B10	L90 / B50	L80 / B10	L80 / B50	L70 / B10	L70 / B50

6. Photometric characteristics

6.1 Coordinates and tolerances according to CIE 1931

The specified colour coordinates are measured integral by a current impulse with Irated of the module and a duration of 100 ms.

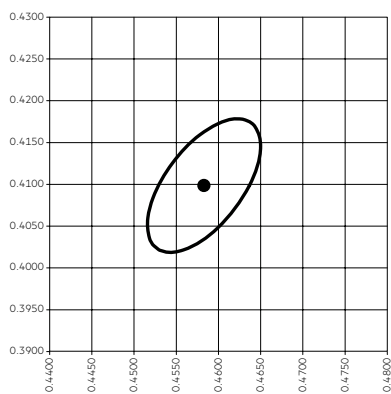

The ambient temperature of the measurement is $t_a = 25^\circ\text{C}$.

The measurement tolerance of the colour coordinates are ± 0.01 .

6.2 Light distribution

The optical design of the CLE product line ensures optimum homogeneity for the light distribution.

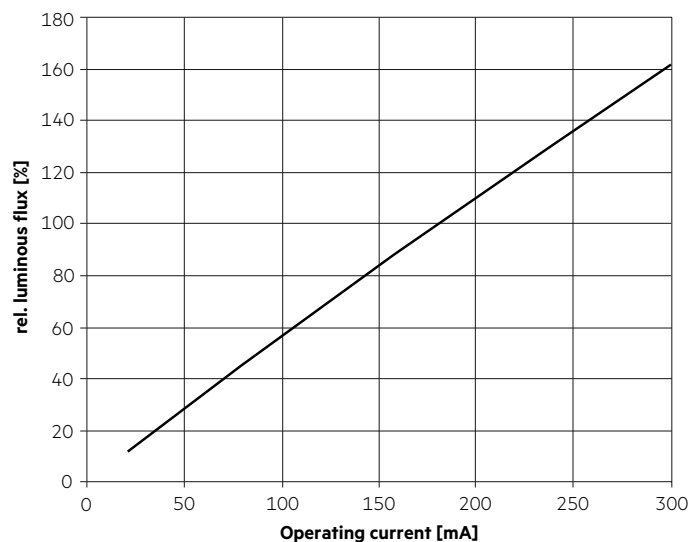

! The colour temperature is measured over the complete module. The single LED light points can be outside of 3SDCM. To ensure an ideal mixture of colours and a homogeneous light distribution a suitable optic (e. g. PMMA diffuser) and a sufficient spacing between module and optic (typ. 5 cm) should be used.
